## Masalah & tujuan

- ▶ Pencarian RME *exact-match* gagal menangani sinonim, singkatan, dan variasi terminologi medis.
- ▶ Tujuan: modul IR berbasis BM25 di OpenMRS yang menangkap relevansi semantik teks klinis.
- ▶ Dataset: MTSamples (~5.000 transkripsi, 40 spesialisasi).

## Kontribusi

- ▶ Bukan sekadar “BM25 di dataset medis”: studi ablasi lapisan normalisasi + ekspansi klinis.
- ▶ 5 varian retrieval (V0-V4) dibandingkan berdampingan.
- ▶ Modul OpenMRS + endpoint JSON + UI dropdown, teruji berjalan.
- ▶ Evaluasi TREC-style: P@K, Recall@K, nDCG@K.

UNIVERSITAS  
GADJAH MADA

# Data & Dataset

[ugm.ac.id](http://ugm.ac.id)

*Merakyat, Mandiri, Berkelanjutan | Inclusive, Self-Reliant, Sustainable*

# Dari 4.999 Baris ke 2.316 Dokumen

UNIVERSITAS  
GADJAH MADA

**4.999**

baris mentah

**2.609**

baris duplikat

**2.316**

dokumen final

**91,2%**

multi-spesialisasi

## Apa yang dikerjakan

- ▶ Pipeline `tools/build_corpus.py`: bersihkan, gabungkan duplikat, saring  $<50$  token.
- ▶ Duplikat digabung (bukan dibuang) agar metadata multi-label dipertahankan.

Sumber: `dataset/README.md`, `corpus_stats.txt` [1].

# Urgensi Diukur Langsung pada Dataset

UNIVERSITAS  
GADJAH MADA

## Negasi klinis

88,0% dokumen (13 term).  
*Stopword list* umum membuang "no/denies/without", padahal maknanya berlawanan.

## Istilah majemuk

60,9% dokumen (28 frasa).  
*Tokenizer* kata-tunggal memecah "shortness of breath" jadi token lepas.

## Singkatan medis

28,8% dokumen (28 singkatan).  
"c/o", "DM", "HTN", "CKD" tak bermakna bila dipecah generik.

## Implikasi

Baseline sebelumnya (lowercase + hapus tanda baca) membuang sinyal yang muncul di sebagian besar dokumen. Solusi: normalisasi klinis (negasi dipertahankan, majemuk dikolaps, singkatan diekspansi) + ekspansi sinonim, dibandingkan ablation terhadap baseline naif.

Pengukuran pada `corpus.jsonl` (2.316 dokumen) via `tools/build_lexicon.py`.

# Lima Varian Retrieval (Ablation Study)

UNIVERSITAS  
GADJAH MADA

| ID | Label                   | Strategi                                                         |
|----|-------------------------|------------------------------------------------------------------|
| V0 | Naive BM25              | lowercase + hapus tanda baca (baseline)                          |
| V1 | Normalisasi klinis      | V0 + negasi dipertahankan + istilah majemuk + ekspansi singkatan |
| V2 | Klinis + ekspansi       | V1 + ekspansi sinonim <i>query-side</i>                          |
| V3 | Char n-gram             | indexing karakter n-gram (3-5)                                   |
| V4 | Klinis + ekspansi + PRF | V2 + <i>pseudo-relevance feedback</i>                            |

Parameter BM25 identik pada kelima varian ( $k_1=1,2$ ,  $b=0,75$ ); fungsi skor: Robertson & Zaragoza (2009) [6].

## Negasi dipertahankan (V1)

Penanda seperti *no*, *denies*, *without* biasanya dibuang *stopword list* umum. Di sini dipertahankan agar makna klinis tidak terbalik (mis. "no fever"  $\neq$  "fever").

## Istilah majemuk dikolaps (V1)

Frasa seperti "shortness of breath" diperlakukan sebagai satu unit makna, bukan dipecah menjadi token lepas oleh *tokenizer* kata-tunggal.

## Ekspansi singkatan (V1)

Singkatan medis (DM, HTN, CKD, dst.) diekspansi dua arah, saat *indexing* dan saat *query*, sehingga bentuk singkat dan panjang saling ditemukan.

## Ekspansi sinonim (V2)

Istilah awam pengguna (mis. "high blood pressure") diperluas ke istilah medis (mis. "hypertension") hanya di sisi *query*, tanpa mengubah index.

## Char n-gram (V3)

Dokumen diindeks berbasis potongan karakter (3-5 huruf), bukan kata utuh, sehingga tahan terhadap salah ketik dan variasi morfologi tanpa bergantung pada *lexicon*.

## Pseudo-relevance feedback (V4)

Ekspansi *query* otomatis: term yang sering muncul pada dokumen teratas hasil pencarian awal ditambahkan ke *query*, tanpa kamus manual.

*Merakyat, Mandiri, Berkelanjutan | Inclusive, Self-Reliant, Sustainable*

# Hasil Evaluasi Lima Varian

UNIVERSITAS  
GADJAH MADA

| Varian                       | P@10          | Recall@10     | nDCG@10       |
|------------------------------|---------------|---------------|---------------|
| V0 · Naive BM25              | 0,5400        | <b>0,4312</b> | 0,6832        |
| V1 · Normalisasi klinis      | <b>0,5420</b> | 0,4284        | <b>0,6865</b> |
| V2 · Klinis + ekspansi       | 0,5120        | 0,4192        | 0,6509        |
| V3 · Char n-gram             | 0,5280        | 0,4055        | 0,6446        |
| V4 · Klinis + ekspansi + PRF | 0,5020        | 0,4139        | 0,6186        |

## Temuan

Selisih V1 vs V0 sangat kecil: nDCG +0,0033 dan P@10 +0,0020, setara **1 dokumen** dari 500 posisi terambil. Recall@10 justru turun. Belum ada uji signifikansi  $\Rightarrow$  klaim yang aman: normalisasi klinis **tidak menurunkan** kualitas, dengan respons  $3,6\times$  lebih cepat (0,68 vs 2,48 ms).

## Verifikasi fungsional

Query "CKD"  $\rightarrow$  menemukan "Chronic Kidney Disease - Followup". Query "hypertension"  $\rightarrow$  menemukan dokumen ber-"HTN".

Sumber: eval/results.txt, dijalankan via EvalRunner.

# Kesimpulan

[ugm.ac.id](http://ugm.ac.id)

*Merakyat, Mandiri, Berkelanjutan | Inclusive, Self-Reliant, Sustainable*

## Apa yang dicapai

- ▶ Mesin IR BM25 dengan lapisan normalisasi + ekspansi klinis, terintegrasi ke OpenMRS sebagai modul.
- ▶ Ablation study 5 varian pada dataset MTSamples (2.316 dokumen).
- ▶ Validasi berbasis data: negasi/majemuk/singkatan muncul di mayoritas dokumen.
- ▶ Hasil: V1 unggul tipis atas baseline naif, namun selisihnya dalam rentang *noise*  $\Rightarrow$  klaim dibatasi pada “tidak menurunkan kualitas, respons lebih cepat”.
- ▶ Keterbatasan qrels (metadata vs transkripsi) diidentifikasi dan menjelaskan sebagian besar penurunan varian ekspansi.
- ▶ Purwarupa pencarian cerdas yang siap dipakai dan dapat diperluas.
